

Congratulations

Dr. Gautam Mukhopadhyay (*Consultant Onco Surgeon*)

and

Dr. Tapan Kumar Dass (*Consultant Physician*)

Dr. M. B. Das (*Consultant Cardiothoracic Surgeon*)

Dr. Avijit Banerjee (*Anaesthetist*)

Your excellent performance has made us proud again.

Clinical Summary: This 36-year-old gentleman was admitted with history of gradually increasing dysphagia (solids >> liquids) since November 2010. Upper GI Endoscopy revealed ulceroproliferative growth in oesophagus at 32cm from the incisor teeth. Endoscopic Biopsy showed Squamous Cell Carcinoma. CECT Thorax done showed locally advanced disease. The patient was given 3 cycles of neoadjuvant Chemotherapy with Injection Paclitaxel and Carboplatin. Follow up PET-CT scan showed metabolically active mass in infracarinal region suggestive of residual disease with no evidence of metastatic or active disease anywhere else. Relevant investigations were done prior to surgery.

Operative Note: Total radical oesophagectomy (Mckeown's) with oesophagogastrostomy and feeding jejunostomy done under General Anesthesia and Thoracic Epidural Anesthesia on 21/04/11.

Operative Findings:

- Right Thoracotomy through 5th ICS showed oesophageal growth extending from pulmonary vein to the carina and infiltrating into the aorta at one region of 2cmx2cm when little bit of tumour tissue was left behind during resection
- No obvious metastatic lymph nodes were seen.
- No evidence of metastatic disease was seen

The whole procedure took 7-8 hours to complete.

Postoperative recovery was gradual but uneventful. Contrast swallow study done on 12th Postoperative day didn't show any anastomotic leak in the neck. At present, patient is afebrile, haemodynamically stable, taking liquids orally and is being discharged

We thank you all for this exceptional performance.

Brig. (Dr.) S. B. Purkayastha
CEO, Ruby General Hospital

DISCHARGE SUMMARY

IP. Number: 728819	Admission Date: 18/04/2011	Discharge Date: 07/05/2011
Bed No.: 3042	Admission Time: 10:28 a.m.	Discharge Time:
Name of Patient: BIPLAB ROY		P
Age: 36 years	Sex: Male	
Guardian's Name: BENOY KUMAR ROY		
Address: JHARGRAM (WEST MIDNAPOOR)		
Telephone #: 9830484636		
Consultant's Name: Dr. GAUTAM MUKHOPADHYAY (Consultant Onco Surgeon)		

Patient was also seen on referral by: Dr. TAPAN KUMAR DASS (Consultant Physician) and Dr. M. B. DAS (Consultant Cardiothoracic Surgeon)

Final Diagnosis: SQUAMOUS CELL CARCINOMA OESOPHAGUS (MIDDLE 1/3)

Clinical Summary: This 36-year-old gentleman was admitted with history of gradually increasing dysphagia (solids >> liquids) since November 2010. Upper GI Endoscopy revealed ulceroproliferative growth in oesophagus at 32cm from the incision teeth. Endoscopic Biopsy showed Squamous Cell Carcinoma. CECT Thorax done showed locally advanced disease. The patient was given 3 cycles of neoadjuvant Chemotherapy with Injection Paclitaxel and Carboplatin. Follow up PET-CT scan showed metabolically active mass in infracarinal region suggestive of residual disease with no evidence of metastatic or active disease anywhere else. Relevant investigations were done prior to surgery.

Operative Note: Total radical oesophagectomy (Mckeown's) with oesophagogastronomy and feeding jejunostomy done under General Anesthesia and Thoracic Epidural Anesthesia on 21/04/11.

Operative Findings:

- Right Thoracotomy through 5th ICS showed oesophageal growth extending from pulmonary vein to the carina and infiltrating into the aorta at one region of 2cmx2cm when little bit of tumour tissue was left behind during resection
- No obvious metastatic lymph nodes were seen.
- No evidence of metastatic disease was seen

The whole procedure took 7-8 hours to complete.

Postoperative recovery was gradual but uneventful. Contrast swallow study done on 12th Postoperative day didn't show any anastomotic leak in the neck. At present, patient is afebrile, haemodynamically stable, taking liquids orally and is being discharged with the following advice -

Condition of Patient at discharge:

- The patient is discharged with: **Feeding Jejunostomy tube in situ.**

Advice on discharge:

1. REST: Restful life at home for 7 days.
2. DIET: Diet of liquid consistency orally of about 2 litres / day (2000Kcal/day) and Feeding Jejunostomy Tube feeds about 1 litre / day (water / clear liquids). Diet should be followed as per diet chart.
3. TOTAL ADVISED FLUID INTAKE: Liberal.
4. Syrup DIGENE 10ml orally thrice daily to continue till further advice.
5. Syrup IBUGESIC 10ml orally as and when necessary (in case of pain)
6. RESOURCE 4 scoops with 200ml of water 4-5 times orally to continue till further advice.

Name of Patient: BIPLAB ROY	
Bed No.: 3042	Admission Date: 18/04/2011
Consultant's Name: Dr. GAUTAM MUKHOPADHYAY (Consultant Onco Surgeon)	

7. Review with Dr. Gautam Mukhopadhyay after 7 days with Histopathological Examination Report at Bengal Oncology Centre (9831369422) or even earlier if necessary **with prior appointment.**
8. Regarding any query about reports (biopsy) if applicable and hospital services please contact 9748457100.
9. Continue treatment under regular Supervision of surgeon/physician of choice.
10. Consult your house Physician or Emergency Department of Ruby General Hospital or any other hospital if any medical problem arises.
11. Remain alert to any Drug Reaction – if any itching / rash / suffocation / any other distress appears after taking any of the above medicine. Put the MEDICINE on HOLD and consult your physician / local physician immediately.

Investigations-Reports enclosed / Please contact Front Office for reports pending if any.
